

BLASTMAP UNDERGROUND

Complete Underground Drill & Blast Design Solution

Design Smarter. Blast Better. Deliver Results.

BLASTMAP UNDERGROUND is a powerful mine planning and blast design solution built specifically for underground mining operations. From development ends and production stopes to shafts and longhole drilling, BLASTMAP UNDERGROUND provides the tools engineers need to design, analyse, and optimize every blast.

KEY FEATURES

Tunnel Shape Designer

Quickly create and customize tunnel profiles to match your mine's specific development requirements. Design accurate tunnel geometries with confidence and ensure consistent blast layouts throughout your operation.

Reusable Cut Designer

Save time and standardize designs with the Cut Designer. Create, store, and reuse proven cut patterns, allowing engineers to apply best-practice designs across multiple headings and projects.

Shaft Design with Rings

Design shaft blasting patterns efficiently using ring-based layouts. Generate accurate shaft blast designs that improve planning consistency and support safe, productive operations.

Uphole Ring Design

Develop and optimize uphole ring patterns for production blasting. Easily manage drilling parameters and ring layouts to maximize blast performance and ore recovery.

POWERFUL REPORTING

Technical Reports

Generate comprehensive technical reports containing detailed blast design information, drilling parameters, and engineering data for review and auditing purposes.

Technical	
Block	BCM 6 000
R1 Hole	
Number of Holes	29
Burden	0
Spacing	2.4
Diameter	76
Number of decks per hole	1
Explosives	INNOVEXTM 100
Total Explosives	1 567.97 kg
Hole Powder Factor	0
Hole Energy Factor	0
Summary	
Total Holes	29
Total Detonators	29
Average Hole Depth	15.5 m
Average Explosives per hole	54.1
Total Explosives	1 567.97 kg
Total Meters Drilled	449.2
Average Hole Powder Factor	0
Average Hole Energy Factor	0
Average Block Powder Factor	0.26
Average Block Energy Factor	0.23

Working Plan Reports

Produce clear, practical working plans for field crews, ensuring accurate communication of blast instructions and improving execution underground.

ADVANCED BLAST ANALYSIS

Vibration Prediction Model

Predict blast-induced ground vibrations before firing. Evaluate potential impacts and make informed design adjustments to help maintain compliance and reduce operational risk.

Fragmentation Prediction Model

Estimate expected rock fragmentation outcomes and optimize blast designs to improve downstream performance, material handling, and overall productivity.

WHY CHOOSE BLASTMAP UNDERGROUND?

- Faster blast design workflows
- Standardized and reusable design templates
- Improved blast quality and consistency
- Advanced predictive analysis tools
- Comprehensive technical and operational reporting
- Designed specifically for underground mining environments

BLASTMAP UNDERGROUND combines powerful design tools, advanced analysis capabilities, and professional reporting into a single integrated platform—helping mining operations achieve safer, more efficient, and more predictable blasting results.
